

Revolutionizing Sustainable EV Repairs

# About us

EV Hub is a Norwegian technology company that provides a Sustainable Electric Vehicle Service Platform & Remanufactured Components for B2B automotive industry players

**Introduction**

Some facts...

# Cars wrecked on scrapyard

- 70% Petrol
- 30% Diesel (approx.)
- 0.1% Electric (approx.)
  
- Fossil: Average age 18.1 years
- Electric: Average age 6.4 years(\*)

*\*This shows EVs are getting wrecked because of lack of sustainable repairs*

Source: [OFV](#)

# EVs don't have sustainable repairs on high-voltage components today

- Instead of repairing old components, new HV components are used
- Insurance calculations becomes difficult; thus cars are getting wrecked

## New Battery prices

Car	Year	Price(*)
Volvo XC40	2021	18 700 EUR
Tesla Model S	2013-2018	20 000 EUR
Audi e-tron	2021	48 500 EUR
Nissan Leaf	2021	6 300 EUR
Hyundai Kona	2020	31 000 EUR
Mercedes-Benz EQC	2021	34 000 EUR
Xpeng G3	2021	27 000 EUR

*Exclude taxes and labor.*

# World Largest EV Markets by 2023

Rank #	Country	Amount of EVs
1	China	16 000 000
2	USA	3 500 000
3	Germany	1 500 000
4	United Kingdom	980 000
5	France	980 000
6	Norway	690 000
7	Korea	460 000
8	Netherlands	440 000
9	Canada	380 000
10	Japan	290 000
11	Sweden	290 000
Total	All markets combined	28M

Unit

**Onboard**  
Charger

**PTC** Heater

**DC DC**  
Converter

# EV Health Condition Report Platform

EV HUB's EV Health Condition Report (EVHR) is a comprehensive Cloud based platform tool for assessing the health of EVs. Our report covers mechanical, low voltage, and high voltage components, providing a complete picture of the EV's condition.

This information is presented in an easy-to-understand format that benefits consumers, car dealers, insurance companies and garage chains alike.

# EV Health Condition Report Platform

## OVERVIEW

### EV HUB App

Connects to OBD2 and uploads CAN bus data to Cloud, supports more than 2500 CAN bus fields for Tesla

### Inspection Report

130 check points

### Cloud Backoffice

As a garage owner, create and share inspection reports with customers

# Health Condition Report Kit

## ANDROID TABLET

Android based tablet  
with EV HUB app

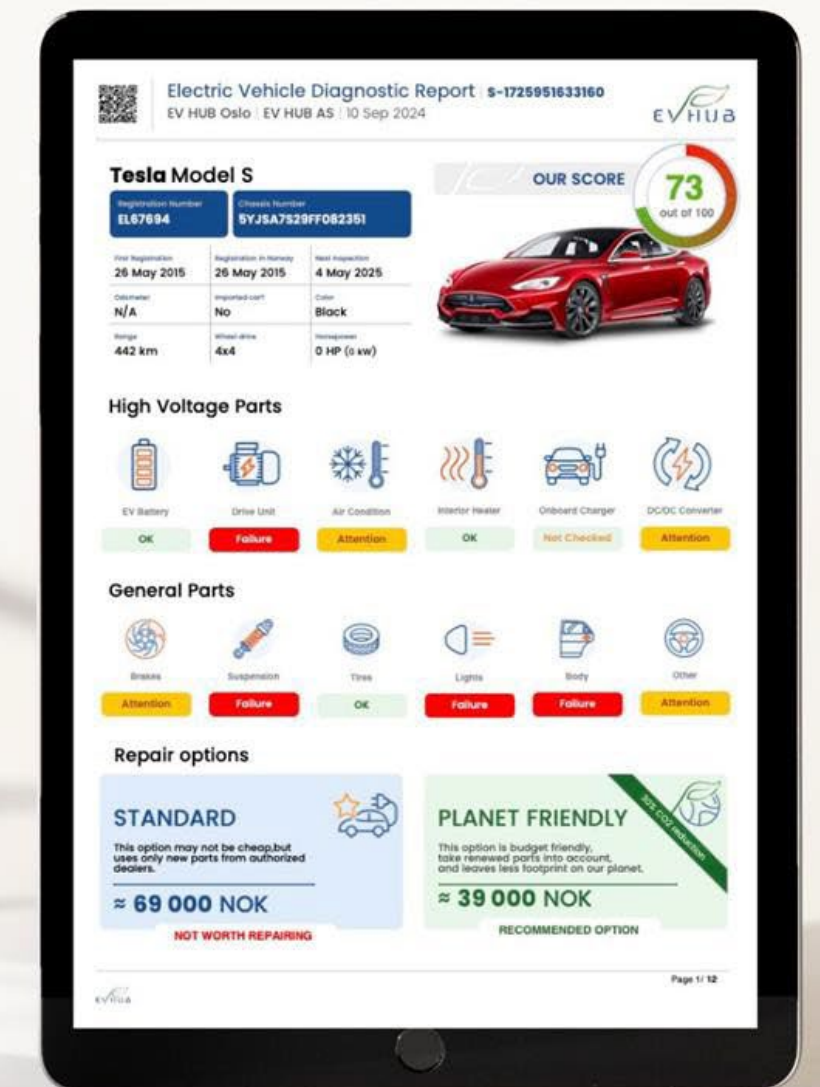

## OBD2 ADAPTER

Customized OBD2  
adapter for fast read-outs

## CAN BUS CABLES

Various cable adapters  
and connectors for CAN  
bus and diagnostics

Android 

# Health Condition Report Summary

## Tesla Model S 75D

Registration Number <b>EL92767</b>	Chassis Number <b>5YJSA7E25GF125919</b>	
First Registration <b>08th Jun 2016</b>	Registration in Norway <b>08th Jun 2016</b>	Next inspection <b>16th Jun 2024</b>
Odometer <b>91460</b>	Imported car? <b>No</b>	Color <b>Black</b>
Range <b>490km</b>	Wheel drive <b>4X4</b>	Horsepower <b>0 HP (0 kW)</b>

OUR SCORE

**59**  
out of 100

### High Voltage Parts

EV Battery	Drive Unit	Air Condition	Interior Heater	Onboard Charger	DC/DC Converter
OK	Failure	OK	OK	OK	OK

### General Parts

Brakes	Suspension	Tires	Lights	Body	Other
Attention	OK	OK	OK	OK	OK

### Repair options

**STANDARD**

This option may not be cheap, but uses only new parts from authorized dealers

≈ **71 000 NOK**

**NOT WORTH REPAIRING**

**PLANET FRIENDLY**

This option is budget friendly, take renewed parts into account, and leaves less footprint on our planet.

≈ **39 000 NOK**

**RECOMMENDED OPTION**

30% CO2 reduction

# Failure - Pictures is key

3.11 Horn Sound Signal **Not Checked**

3.12 Error Messages On Lights **OK**

3.13 Reflex **OK**

3.14 Headlight Washers **OK**

## 4. Drive Unit

4.1 Overall Condition **OK**

4.2 Noise **OK**

4.3 Leakage **Failure**

Result  
Estimated Repair Cost Standard  
71000

4.4 Oil **OK**

4.5 Coolant Liquid **OK**

4.6 Bearing **OK**

## 5. Drive Belt/Gear

5.1 Drive Shafts **OK**

5.2 Gear Exchange **OK**

## 6. Electrical components

6.1 12V Battery **OK**

6.2 Visual Inspection Of High Voltage Cables **OK**

6.3 Visual Inspection Of The All Batteries **OK**

6.4 Charging Speed **OK**

6.5 Charging Port **OK**

6.6 Charging Cable Test **OK**

6.7 Air Nozzles **OK**

6.8 Heater **OK**

6.9 Pollen filter **OK**

6.10 Air Conditioning Compressor **OK**

6.11 Capacitor **OK**

6.12 Ac Pipes **OK**

6.13 Central Lock Door Lock **OK**

6.14 Airbag **OK**

6.15 Instrument Lighting **OK**

6.16 Heated Seats Cooling **OK**

6.17 Heated Windows **OK**

6.18 Cabin Fan Low High **OK**

**EV HUB App**

# EV HUB App – Introduction

## Cloud-Powered Insights:

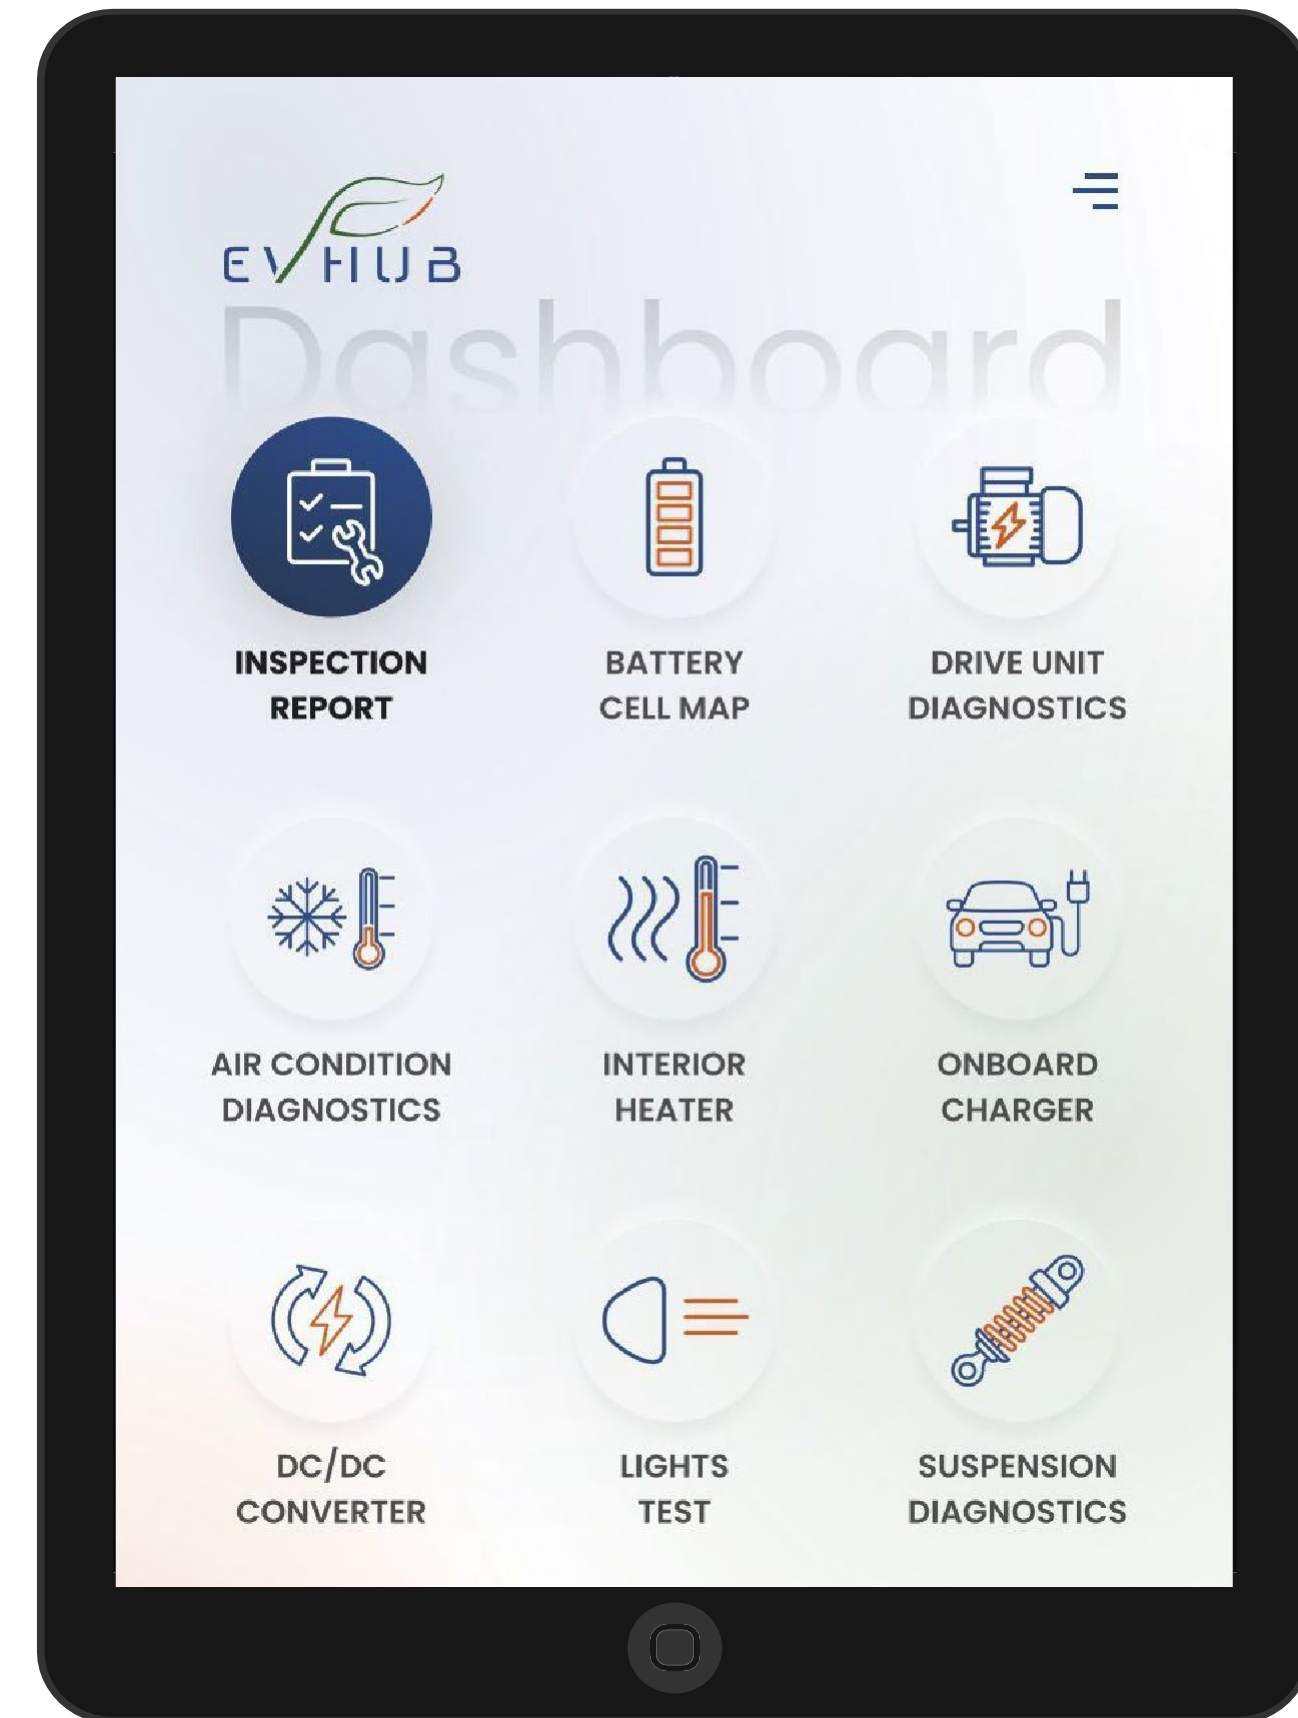

- Utilizes CAN bus to scan EVs and uploads data to the cloud
- Parses high voltage values to generate detailed inspection reports for mechanics

## Real-Time Dashboard:

- Provides mechanics with live CAN bus data, offering instant access to various high voltage values
- Ideal for troubleshooting and assessing the condition of high voltage components

## Comprehensive HV Support:

- Currently supports battery data, drive-unit, PTC Heater, and HVAC data
- Ensures a thorough analysis of crucial EV components.

# EV HUB App – Scan HV battery

1. Install "EV HUB App" on your Android tablet
2. Use OBD2 dongle from EV HUB
3. Use OBD2 adapter cable from EV HUB
4. Connect OBD2 adapter cable to car diagnostic port
5. Pair your phone with your OBD2 adapter
6. Start "EV HUB App"
7. Go to "Battery" section to see battery values
8. Go to BMS to see cell map (cell voltages)

Android 

**REAL LIFE  
PROBLEM  
(RLP)  
COURSE**

# Real Life Problem (RLP) Course

## WHAT IS IT?

EV Hub provides a Real Life Problem (RLP) course for Electric Vehicles.

The course provides both theoretical and practical knowledge about how to perform diagnostic and repairs on the most **relevant** EV models from the local market.

The goal is to educate and certify garages about understanding and inspecting EVs, including high voltage issues and solutions
